DETAILED ACTION

*Claim Rejections - 35 USC § 112*

Claims 13-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Independent claims 13, 14, and 21 recite “an immunologically functional derivative”. It is unclear what properties or regions are being retained in said derivative. This affects the dependent claims.

Also, claims 13 and 14 recite “a safe and effective amount of a pharmaceutical composition” but do not identify what the desired physiological effect is. Since the amount may be different depending on what effect is required, this ambiguity affects the scope of the claims. This also affects the dependent claims.

Claim 16 lacks antecedent for “the second Varicella Zoster protein”.

*Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 13-16 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Nader et al. Claims 13 and 14 respectively require administration of a pharmaceutical composition

Art Unit: 1648

comprising varicella zoster virus IE63 protein or a nucleic acid encoding IE63. Nader et al teaches administration of a pharmaceutical composition containing live varicella zoster virus. Since the viral genome encodes IE63, and the virion includes IE63 protein (see Kinchington et al as evidence), the live vaccine of Nader meets each and every claim limitation. This rejection could be obviated by amending the claims to recite isolated or purified protein or nucleic acid.

Claims 17-19 and 21 are free of the art, because the only prior patient treatment methods comprising IE63 involved administration of whole viruses, and this prior art does not teach or suggest adding an adjuvant. The prior art does not teach or suggest patient treatment methods involving administration of isolated or purified IE63 protein or coding sequence.

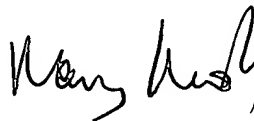

### *Conclusion*

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mary E. Mosher, Ph.D. whose telephone number is (703) 308-2926. The examiner can normally be reached on Monday -Thursday and alternate Fridays from 6:30 AM to 4:00 PM.
